## Introduction

## We asked people from across Scotland about their relationship with money, debt, credit, and planning for the future.

Citizens Advice Bureaux have seen a steady decline in the level of debt-related advice being sought by clients, this having reduced as a proportion of all bureaux business by over 20\% since 2013/14 ${ }^{1}$.

However, within debt advice, bureaux have seen a steady increase in certain areas over the same period, such as an increase in debt related to rent arrears (over 40\%); overpayments of Housing and Council Tax benefits ( $39 \%$ ) and overpayments of Working and Child Tax Credits (100\%).

In addition to this, one of the most common issues for bureaux clients is debt related to Council Tax arrears, with over 13,200 instances of advice on this recorded in 2015/16.

The second most common debt-related issue for bureaux clients is that related to credit and store cards, with over 10,850 instances of advice recorded in 2015/16.

A decision was therefore taken to explore financial management in general to gain a sense of how the people of Scotland view personal finance issues, including the affordability of bills/repayments and the use of credit.

To achieve this, an online survey was commissioned through Ipsos MORI of 1,500 consumers representative of the Scottish population in terms of sex, age, region and working status.

[^0]
# How are Scottish consumers' managing financially? 

#### Abstract

Almost a quarter of survey respondents (23\%) reported that they were finding it difficult to manage financially, while 38\% reported that they were 'coping' on their present income. A further 38\% of respondents felt they were 'living comfortably' on their income.

All figures relating to how respondents said they were managing financially can be found at Appendix 1. Findings of note included:
> Those aged 55 and over were more likely than younger respondents (aged 16 to 54 ) to say they were living comfortably (51\% compared to 30\%). Conversely, those aged 54 and under were more likely than older respondents to say they were finding it difficult to cope on their current income ( $28 \%$ compared to $16 \%$ );
> Half of respondents who were unemployed (49\%) and a quarter working part time (26\%) said they were finding it difficult to cope, compared to $19 \%$ working full time and $12 \%$ in retirement;
> Respondents renting their homes from council/ social landlords were more likely to report finding it difficult to cope (46\%) than those renting from a private landlord (36\%);
> Respondents living in the Highlands and Islands were less likely than average to say they were living comfortably (29\% compared to 38\%) and more likely to say they were coping (47\% compared to 38\%). Respondents in the South West were more likely than average to be finding it difficult (26\% compared to 23\%); and
> Respondents who received their primary source of income on a non-monthly basis (either weekly/fortnightly, or less than monthly) were more likely to find it difficult to cope than those who received it on a monthly basis.

## 23\%

are finding it difficult to manage

## 38\% <br> are coping

## Use of credit for daily living

Respondents were asked how often in the last year, if at all, they had run out of money before pay day and needed to either use credit; an overdraft facility; or borrow money in order to 'get by'. Almost half of respondents (47\%) said this never happened to them, while 15\% reported that this happened 'most of the time' or 'always'.

Of the 769 respondents who had run out of money before pay day, a fifth (20\%) had to borrow money/ use credit to pay their rent or mortgage; 48\% had to borrow money/use credit to buy food; and 29\% to pay for utility bills.

Just over a quarter of respondents overall (26\%) ${ }^{2}$ reported having borrowed money/used credit to buy food three times or more in the previous year, with $9 \%$ having to do so in relation to their rent/ mortgage.

Those under the age of 35; working part-time; living in private rented accommodation; or earning less than $£ 16,000$ per annum appear to be most likely to experience multiple instances of having to go into debt to pay for essential items. Full findings are available at Appendix 2.

Respondents were also asked how often they had to miss a payment entirely/go without in the past year, with almost one-quarter of respondents (24\%) having gone without food at least once in the previous year. As with having to borrow for essentials, those aged below 35; in part-time employment; living in private rented accommodation; or earning less than $£ 16,000$ per annum seem to experience this the most.

## Table 1:

How often respondents had to go in to debt to pay for essential items in the past year

|  | Mortgage / <br> Rent | Food | Utility <br> payments | Appropriate <br> clothing | Basic <br> toiletries |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Never | $76 \%$ | $49 \%$ | $68 \%$ | $61 \%$ | $63 \%$ |
| Once or twice | $12 \%$ | $26 \%$ | $17 \%$ | $25 \%$ | $19 \%$ |
| Three times or more | $9 \%$ | $23 \%$ | $12 \%$ | $11 \%$ | $14 \%$ |
| Go without/miss <br> entirely | $10 \%$ | $23 \%$ | $14 \%$ | $37 \%$ | $24 \%$ |

Base: 769 respondents

2393 respondents from the 774 who reported running out of money before payday, as a percentage of the 1501 total respondents

51\%<br>run out of money before payday

use credit to
buy food

## Coping with unexpected bills

Respondents were asked how they would cope with an unexpected bill that had to be paid within 7 days. While almost half (46\%) maintained that they could pay a bill of $£ 100$ without using savings or cutting back on essentials, this proportion decreased as the bill increased in value to $£ 250$ (31\%) and $£ 1000$ (17\%).

A fifth of respondents (20\%) would have to use credit or borrow money to pay an unexpected bill of $£ 100$ within 7 days, while a small minority ( $4 \%$ ) could not pay this at all. The proportion of respondents who could not pay an unexpected bill at all rose with the value of the bill, to $9 \%$ for a bill of $£ 250$ and $18 \%$ for a bill of $£ 1000$.

The respondents most likely to have to borrow money/use credit to pay a bill of $£ 1000$ were those living in private rented accommodation (31\%) and those in full-time employment (26\%).

## What bills/repayments do Scottish consumers' give the highest priority?

Mortgage/rent payments were given the highest priority, followed by utility bills and food costs. Credit repayments were accorded middling priority. The full results can be found at Appendix 3. While there were few notable differences across the client groups, some findings of note included:
> Those aged 55 and over would prioritise utility bills above mortgage/rent payments, as would those on low incomes;
> Those on high incomes rank payment of motor vehicle insurance more highly than credit card repayments, with the opposite being true for those on low incomes.

Table 2: Ability to pay unexpected bills within 7 days

|  | Bill of <br> $£ 100$ | Bill of <br> $£ 250$ | Bill of <br> $£ 1000$ |
| :--- | :---: | :---: | :---: |
| Could pay without using savings or cutting back on essentials | $46 \%$ | $31 \%$ | $17 \%$ |
| Could pay but would have to use savings | $20 \%$ | $28 \%$ | $35 \%$ |
| Could pay but would have to cut back on essentials | $11 \%$ | $8 \%$ | $5 \%$ |
| Would have to use credit/borrow money to pay | $18 \%$ | $21 \%$ | $21 \%$ |
| Would have to sell a personal or household item to pay | $2 \%$ | $3 \%$ | $2 \%$ |
| Could not pay | $4 \%$ | $9 \%$ | $18 \%$ |

# How financially resilient are Scottish consumers? 

Respondents were asked how much they agreed or disagreed with several statements about how worried they were about financial situations.

Findings show that:
$>$ A quarter of respondents (26\%) were worried about being unable to afford living expenses such as food, transport or clothes;
> One-in-ten (11\%) were worried about having utilities disconnected;
> Eight percent were worried about receiving a court summons from a creditor; and
> Seven percent were worried about being evicted from their home or having it repossessed.

There were a number of differences across the key subgroups (full details can be found at Appendix 4), some of the most notable of which were:
$>$ In general, those aged under 55 were more likely than older respondents to say they were worried about their financial situation. For example, one in three respondents aged under 55 worried about being able to afford living expenses, compared to $14 \%$ aged 55 and over. One in ten worried about being evicted or having their home repossessed, compared to 4\% aged 55 and over;
> Those living in council/social rented accommodation were more likely than average to be worried about their financial situation. Almost half (49\%) worried about being unable to afford living expenses (compared to 26\% overall), a quarter worried about utilities being cut off (26\% compared to 11\% overall), and 21\% worried about receiving a court summons from a creditor (compared to 8\% overall);
> Just over half ( $54 \%$ ) of those with an annual household income of less than $£ 15,600$ were
worried about being unable to afford living expenses. In that same category, 59\% were worried about utilities being cut off; $40 \%$ were worried about being evicted/having their home repossessed; and 27\% were worried about receiving a court summons from a creditor;
> Those who received their primary income weekly or fortnightly were more likely than those who received their income on a monthly basis to be worried about all scenarios, with $45 \%$ worried about being unable to afford living expenses. It was noted that the higher the household income, the more likely it was to be received monthly; and
> More than one-quarter of respondents in some form of work (26\%) were worried about being unable to afford living expenses.

One measure of financial resilience is the level of savings an individual has. Around one in five of respondents (22\%) reported that they had no savings as they could not afford to save, while 4\% reported that they had no savings but could afford to save if they chose to. Almost a quarter (24\%) said they had 2 months' pay worth of savings or less, while $40 \%$ had 3 months' pay worth or more of savings.

In considering all of those with no savings, no matter their reason for having none, those aged under 55 were more than twice as likely (35\%) than those 55 or Over (14\%) to fall into this category. Those living in council (55\%) or private (44\%) rented accommodation where far more likely than owner occupiers (16\%) to have no savings. Perhaps unsurprisingly, the likelihood of not having any savings decreased as the level of income increased.

# The impacts of financial uncertainty on Scottish consumers 

## Participants were asked about their understanding of their rights in relation to debt, and how finance issues made them feel.

Fewer than half of respondents (42\%) felt they understood their rights in relation to debt. The figure was lower among:
> Those aged less than 35 compared to older respondents (35\% vs 47\%);
> Those not in work than those in work ( $28 \%$ vs 42\%); and
> Those with an annual income of less than $£ 5,200$ than higher earners ( $32 \%$ vs, for example, $52 \%$ of those with an income of over $£ 78,000$ ).

At least one-in-ten respondents were experiencing one or more negative impacts due to their current financial situation, including health problems; sleep disturbance; relationship issues and/or being worried about deductions being made from their income for outstanding debts.

Full details can be found in Appendix 5; however, the respondents most likely to feel such negative impacts were:
> Aged under 35;
> Not working;
> Living in council/social rented accommodation;
> On an income of less than $£ 15,600$ per annum; and/or
> Receive their income weekly/fortnightly.

## 1 in 4 people worry about living expenses

of 16-34 year olds

## $44 \%$

of people not in work

## The main financial worries for those in council or social housing are:

1 in 4
utilities
being cut off

1 in 5
cumbt
summons

15\% being
evicted

Half paying for living expenses

More than 1 in 10 people say finance worries are causing them:

## Use of credit by Scottish consumers

## Over a third of respondents (34\%) stated that they had never checked their credit rating, while a small proportion (5\%) said that they either did not know how to check it or did not know what a credit rating was.

A further 14\% of respondents were not sure, or could not remember if they had ever checked their credit rating. One-quarter of respondents had checked their credit rating in the last 6 months, while for $15 \%$ of clients it has been over 12 months since they checked their credit rating.

A little over one-quarter of respondents (26\%) had not used any form of credit (including loans; store cards; overdrafts; hire purchase; etc.) in the previous 5 years. In contrast, twice this proportion (52\%) had used a credit or store card and $29 \%$ had used an overdraft facility. A further 20\% had obtained a 'formal' loan (i.e. from a bank or finance company) while $17 \%$ had obtained a loan from a friend or relative.

Respondents were asked if they had been turned down for any type of credit within the past 12 months, with $13 \%$ stating that they had been. It is of interest to note that those in full- or part-time employment were as likely to have been refused credit as those who were not in work³, while renters were more than twice as likely as owner occupiers to have been refused.

The most common reason for being refused credit was that the individual had a poor credit rating (52\%), followed by already having too much debt ( $27 \%$ ) or having no regular source of income from employment (20\%). A little less than one-fifth of respondents (18\%) had been refused credit as they were not earning enough.

Table 3: Types of credit held and experience of being turned down for credit

|  | Had credit in the past <br> five years | Been turned down for credit in <br> past 12 months (n=93) |
| :--- | :---: | :---: |
| Any type of credit | $72 \%$ | $13 \%$ |
| Any loan | $37 \%$ | $7 \%$ |
| Standard interest loan | $24 \%$ | $5 \%$ |
| High interest loan | $7 \%$ | $3 \%$ |
| Hire purchase/catalogue | $16 \%$ | $3 \%$ |
| Informal loan | $17 \%$ | $2 \%$ |
| Only one type of credit | $31 \%$ | $8 \%$ |
| More than one type of credit | $41 \%$ | $5 \%$ |

[^1]Table 4: Groups being turned down for credit/loan

|  | Refused credit | Refused a loan |
| :--- | :---: | :---: |
| All | $13 \%$ | $7 \%$ |
| Working full-time | $16 \%$ | $10 \%$ |
| Working part-time | $15 \%$ | $9 \%$ |
| Not working | $16 \%$ | $9 \%$ |
| Retired | $3 \%$ | $2 \%$ |
| Owner-occupier | $8 \%$ | $4 \%$ |
| Council tenant | $25 \%$ | $17 \%$ |
| Private rented tenant | $21 \%$ | $11 \%$ |

## Scottish consumers and debt

## A little over one-quarter of respondents (28\%) reported that they currently had more debt than compared to 5 years ago, while $14 \%$ said they had the same amount.

A higher proportion (33\%) said they had less debt while almost one-quarter (23\%) reported having never been in debt in the previous 5 years. The full results can be found at Appendix 6.

A higher proportion of female respondents (31\%) than male respondents (25\%) reported being in more debt than 5 years ago, while those below the age of 35 ( $45 \%$ ) appeared far more likely than the other age groups to have more debt. Those living in private rented accommodation were more likely to have more debt than 5 years ago ( $40 \%$ ) than either council tenants (32\%) or owner occupiers (25\%).

Of those who reported being in more debt than 5 years ago (28\%), the most common reason for being so was an increase in bills (43\%), while just over one-third (37\%) said the reason was employment related. Almost one-quarter of respondents (24\%) said their increased debt was due to poor financial management in general while $14 \%$ said it was as a result of a reduction in/loss off
benefits or tax credits. The full results can be found at Appendix 6.

It was also found that it was more likely for debt to have arisen due to multiple issues (56\%), than only one issue (40\%). For example, female respondents were more likely to cite multiple reasons (61\%) than only one (35\%) in comparison to their male counterparts ( $49 \%$ and $47 \%$ respectively).

A small proportion of respondents (13\%) had been contacted in relation to a debt they thought they either no longer owed, or knew nothing about. Of those contacted ( $n=192$ ), the majority (65\%) had been contacted by letter while 20\% had been contacted by phone. One-third of those contacted (33\%) had queried the debt; 29\% had repaid/ were repaying the debt; and almost one-quarter (24\%) either did nothing or ignored the contact. A small proportion (13\%) made contact with an organisation like the Citizens Advice Bureau for advice.

## Concluding remarks

Debt and the use of credit are complex issues and it is seems reasonable to conclude from the survey findings that the people of Scotland experience these complexities in both a wide range of contexts and in relation to different needs.

The fact that over one-quarter of respondents to the survey reported having to go into debt at least once in the previous year to pay for food provides a stark indication of how fundamental the impacts of financial difficulties can be.

It would also appear to be the case that financial issues such as running out of money before 'pay day' and having to go into debt to pay for essentials are having as much impact on those in employment as those not.

For example, if all survey respondents in full-time employment are considered then it can be said that $30 \%$ of these had to go in to debt at least once in previous year to pay for food, a slightly higher proportion than for the sample as a whole (26\%).

These and other findings indicate that issues related to credit; debt; and financial resilience are of relevance to Scottish citizens from all walks of life and cannot be dismissed as impacting only on certain sub-sections of society.

The Scottish Association of Citizens Advice Bureaux Citizens Advice Scotland. Scottish charity (SC016637) and company limited by guarantee (89892)

[^0]:    1 A reduction in the number of debt-related enquiries from 119,492 in 2013/14, to 96,480 in 2015/16.

[^1]:    3 This figure does not include those who were retired.

[^2]:    4 This is the result of a 'Maxdiff' analysis where respondents are asked to say which bill/repayment from a series of lists was the most/ least important to pay if they were 'short of money' and could not afford to meet all demands.

[^3]:    ** The more money earned, the more likely to receive that income monthly.
